About me

I am interested in the technology field because it stands for future technological advancement and has the power to drastically alter the way we work and live. My full name is YULDOSHEV ABDUKODIR. I am from one of the most crowded city called Andijan region, Uzbekistan. I have had a great passion for becoming a student of South Korean universities when I was young. So, I have chosen Kagnwon University.

From an early age, I have been captivated by the world of technology. I have been taking extra math and informatics classes to improve my understandings in the computer field. I have learned Python and all the necessary tools for it. I also have fundamental knowledge of HTML and CSS, which I have not only studied educationally but also took part in practical projects and provided assistance for the first time. At the present time, I am learning other beneficial programming languages as well.

Moreover, in order to prove my proficiency in the English language, I am proud to say that I have an IELTS score of 6.5. This can undoubtedly confirm flawless communication and enhance my collaborative efforts in group projects, which also played a key role in my overall academic and personal development. I currently speak fluent English, Russian, and my native Uzbek, and I have a beginner level of Korean.

Additionally, I belong to soccer and badminton clubs to keep myself healthy, and it has also taught me valuable lessons about leadership skills, discipline, and teamwork.

When it comes to why I chose Kagnwon University because it has already demonstrated its great academic excellence and faculty, which provide a better education. I strongly believe that this should be the university that suits me best because it has all the desired opportunities in my chosen program, where I can receive excellent instruction from experienced professors. Likewise, it maintains its own prestige all around the world while being one of the best in South Korea.

In conclusion, I strongly believe that my academic achievements, experience in programming languages, IELTS score, and various extracurricular standings make me a strong candidate for your university. I look forward to the opportunity to take part in and achieve success in your academic community.

My Plans

The university will educate me about Korean culture and language throughout my freshman year. In addition to understanding them more accurately, I have a number of opportunities, such as going to general restaurants and movie theaters and exploring the rich resources of the university library, to deepen my understanding of Korean traditions. Likewise, to stay up-to-date on national holidays, I can join the public community and communicate with them. In this case, at the present time, I am learning Korean, which is one of the best keys to acceptability due to knowing the country's mother tongue. as well as preparing for the TOPIK exam, which can validate my knowledge of Korean.

The reason I chose the spring semester is to expand my knowledge in advance in my field of study, get ready for the lessons, and get everything as much as possible in the lectures because my goal is to get the maximum amount of scholarship by seeing myself on the list of outstanding students at the university. Moreover, I'm delighted about the chance to learn more from distinguished professors whose work interests me and from whose research I may learn more. I'll devote the majority of my time to enhancing my analytical, critical, and memory skills by attending more lectures and learning additional materials that will make it easier for me to tackle my homework and help for personal growth, which will make me great at my study field. On the weekends, I visit either parks to replenish my moral strength from the power of nature or interesting locations in the city for cultural recreation.

Furthermore, during my studies, recognizing the significance of a fully developed university experience, I aim to actively participate in the university's volunteer program and community initiatives to keep up with the latest news. If possible, I will also go to various internships to gain initial job experience in computer engineering. I think it can help me put all the knowledge into practice. Therefore, I plan on obtaining a master's degree after completing my bachelor's degree by acquiring all the knowledge needed to be one of the best engineers in my field. Then, for several years, I will work for companies until I am able to return to my country as an experienced engineer to help develop this industry in Uzbekistan as well.

In summary, my studies combine challenging academics, cultural awareness, and hands-on learning. I believe your university is the perfect place for me to grow academically, culturally, and professionally. I am eager to be part of the university community and hope to make a big impact in the world of IT.
